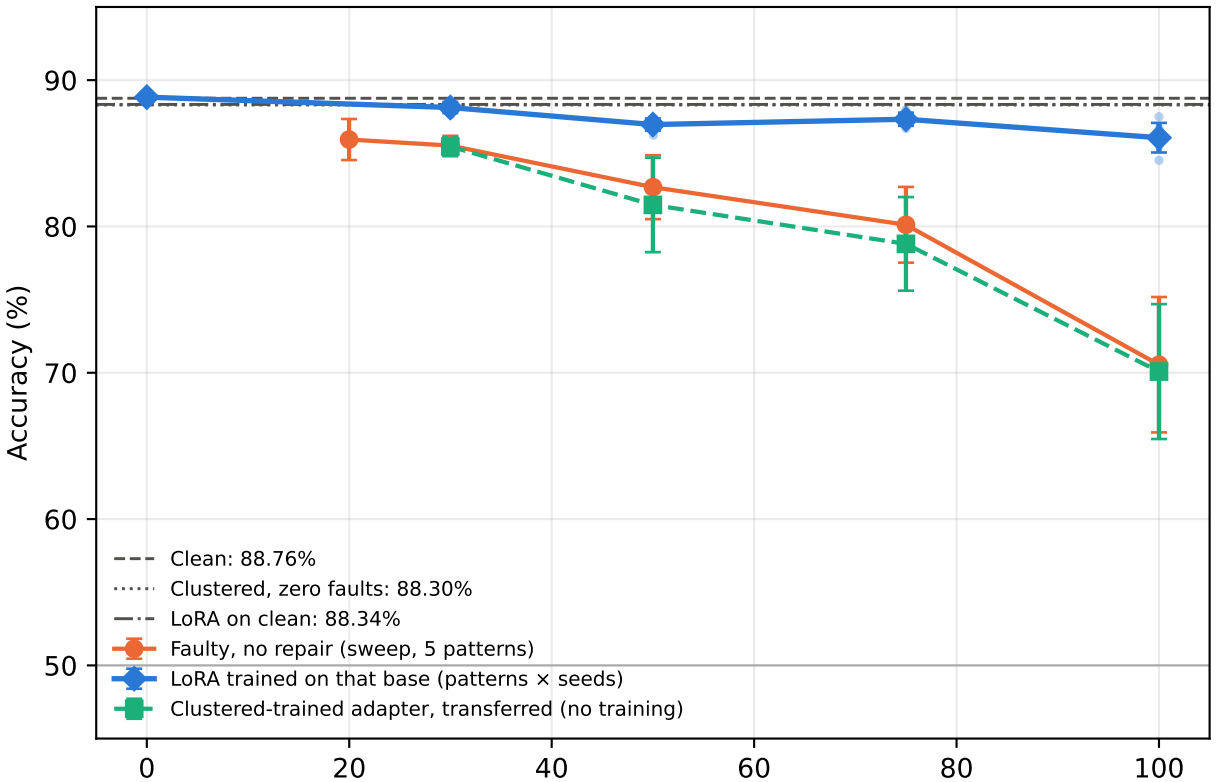
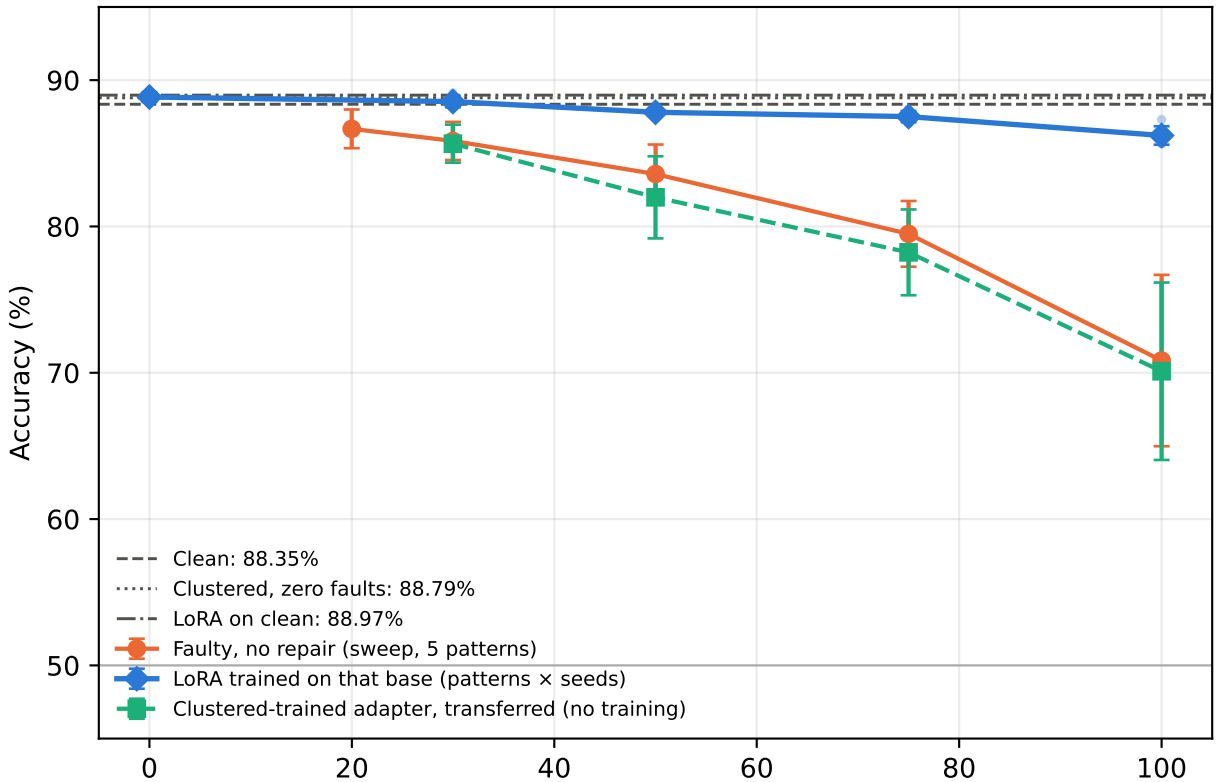
TinyBERT / SST-2: LoRA recovery controls (rank 4, all Linear layers, 16 clusters per tensor)

Linear weights only — sst2-validation-872

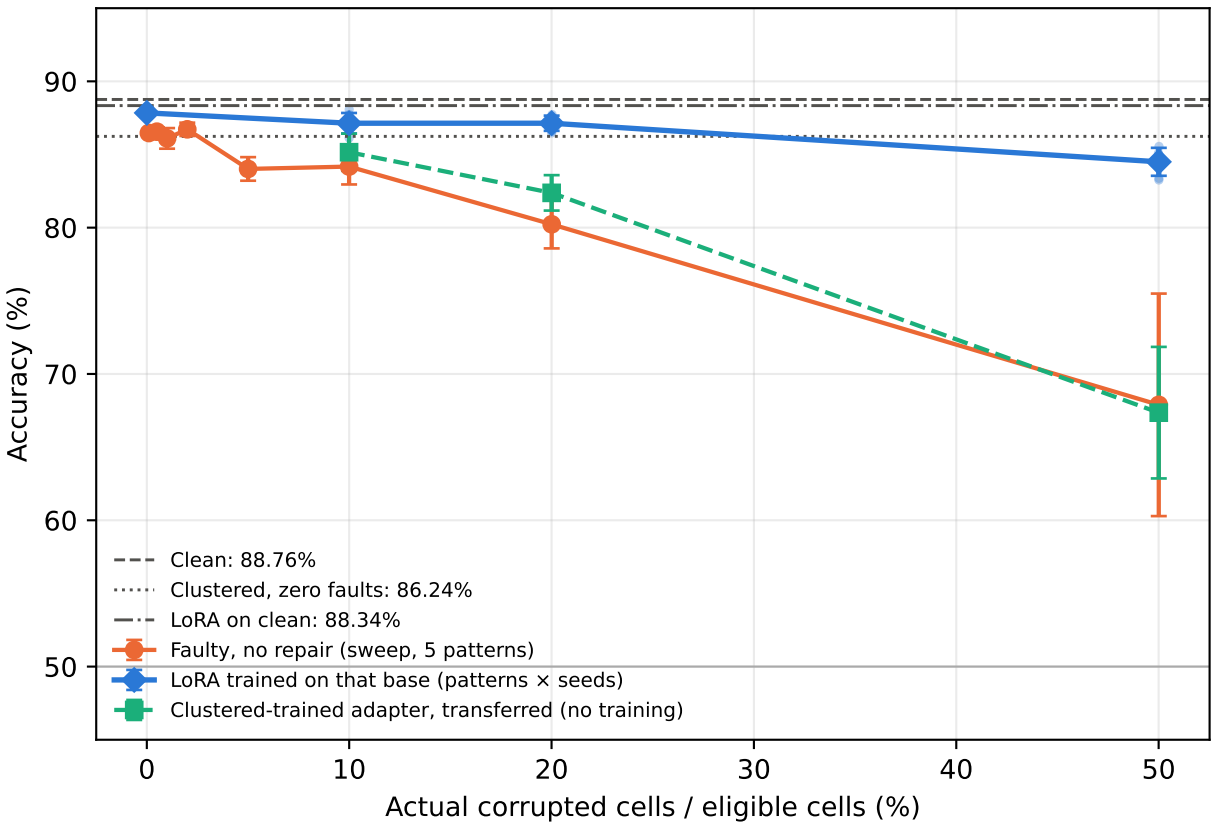


Linear weights only — sst2-original-test-1820



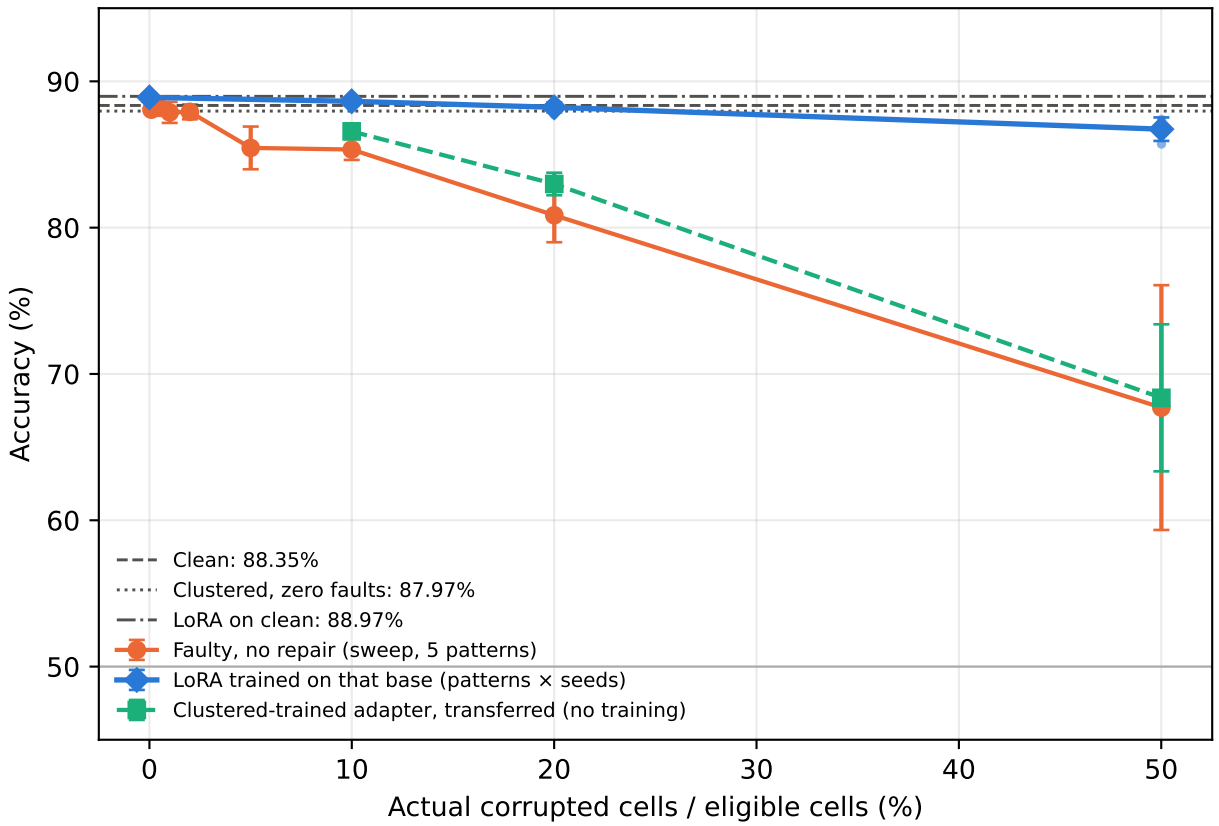
Actual corrupted cells / eligible cells (%)

Linear weights + embeddings — sst2-validation-872



Actual corrupted cells / eligible cells (%)

Linear weights + embeddings — sst2-original-test-1820



Means ± 1 sample SD. LoRA at 0%: clustered base, 3 seeds; faulty rates: 3 patterns × 2 seeds. Transfer: 3 clustered adapters × 3 patterns. Small dots: individual LoRA runs. Test sets shown separately.
